

Anti-noise foils

Anti-noise foils have a dual purpose. Like shims, they reduce or eliminate brake noise but they also act to minimize brake drag, by holding the brake pad away from the disc when the brake system is not in action.

When you change the pads, check that the contact areas of the caliper are free from dirt and grease.

Important: Anti-noise foil is supplied with a protective paper, which must be removed before you fit the brake pads!
